

# FROM ALLESEE ORTHODONTIC APPLIANCES

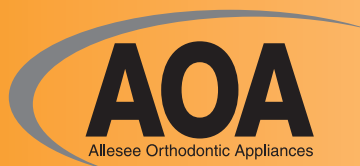

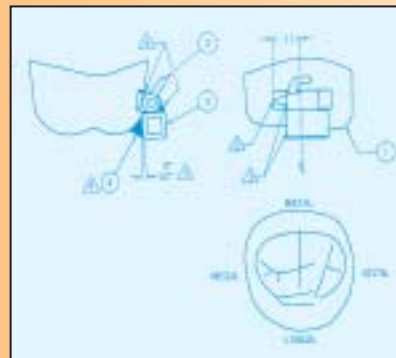

## MARA KIT

The Versatile MARA (Mandibular Anterior Repositioning Appliance) is available in a kit format that allows you to diagnose, size and deliver in virtually the same day. The Kit comes with 13 patient possibilities based on Stainless Steel Crown sizes. Just size, add the advancement elbows and spacers as needed.

Repairs to existing MARA Appliances can usually be accomplished the day the patient presents at your office. Adjuncts such as lingual arches and palatal expanders can be added by most "In-House" lab personnel. Or, select the proper size, seat on the patient's models and forward to AOA with your prescription for accessories. We will professionally add the items requested and return in a timely manner; often in time for the separator recall.

By having all the popular sizes on hand, you can ensure the best fit possible. And, ordering replacement units is hassle free. By using the inside of the Kit label, you or your staff can call your order in with the exact item numbers and quantity required.

The MARA is clinically proven to be a dependable, durable and easily tolerated non-compliance Class II corrector. Now it is as convenient as your band supply.
